Firebase Screenshots

Submitted By: Ebrahim Mohammed

ST10084812

This is my **Firebase Console**, within this console is my created project labelled 'Application Prototype' which is linked to my Prototype application in Android Studio IDE.

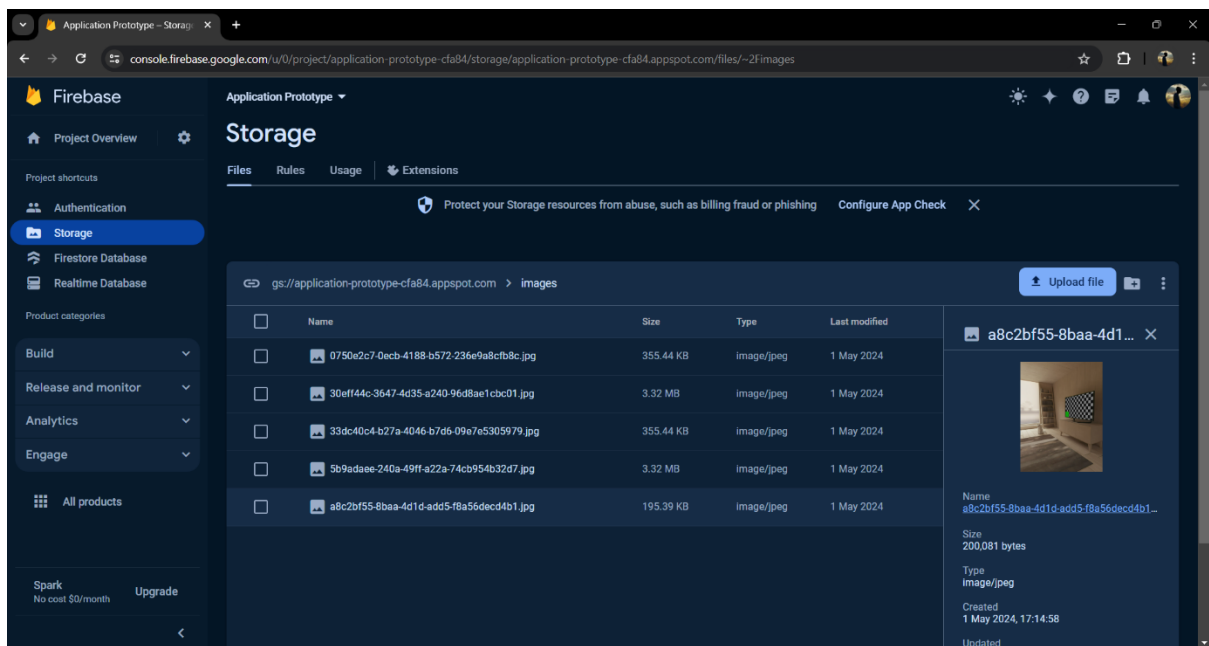

Within the mentioned project is my **authentication**, this saves user login details.

Once a user successfully logs into the application prototype, they will then have the ability to enter data into the time sheet within the application, once the user enters save, it is saved in ==real time== to this database.

Users also have the option to add an image, once they do, it is saved as a Uri into Cloud Firestore.

You can then view the stores images in the ==Image Storage.==

This concludes my Firebase screenshots with all relevant screenshots pertaining to my Application Prototype.
